TRACcess™

Smartphone access
and real-time tracking

Supra
A UTC Fire & Security Company

Your Smartphone is the Key

Your employees or vendors access TRACcess lock devices using Supra's eKEY software on their TRACcess-certified Android™, BlackBerry®, or iPhone®.

Keyholders use a PIN code to access the software so only the authorized user can operate it. Keyholders automatically receive updates and site permissions wirelessly to their smartphones.

Every access is automatically tracked, recorded, and sent using real-time wireless transfer to a secure, central web-based server during the update process.

An audit trail showing device access information is available through the web-based TRACcess Manager 5 software.

Keyholders can be given access to a single site, a group of sites, or all sites in a division.

Electronic Locking Devices

There are a variety of TRACcess devices, addressing many access requirements. They all record who has accessed them and at what time, and require no external power, nor wired network. TRACcess allows you to maintain your current access control systems (e.g., keys or access cards), and enables your employees or vendors to access specific facilities and locations using their smartphone.

TRAC-Lock BT

TRAC-Lock BT replaces a standard lockset with a wireless, intelligent entry-management system. The product consists of an interface mounted on a door's exterior to communicate with wireless TRACcess keys, and a controller module on the door's interior to control the lockset. When the unit is opened with an authorized wireless TRACcess key, the lock is updated with a Keyholder ID, Date and Time and transmits the data to the TRACcess Manager System for a comprehensive audit trail of site usage and keyholder activity.

TRAC-Box BT

The TRAC-Box BT is an economical key holding device with durability in all environmental conditions.

TRAC-Box BT Portable

The TRAC-Box Portable provides a flexible mounting solution for remote gates, construction projects, or where temporary access is needed.

TRACcess Manager 5 Software

- Wide range of reporting options and reports can be scheduled for automatic delivery daily, weekly, or monthly
- Secure system that provides multiple levels of access
- Intuitive web interface with online help
- Site managers grant permissions to vendor companies
- Vendor companies grant permissions to their keyholders
- Easy to grant, change, or withdraw access permissions
- Online convenience makes it easy to manage from any Internet-connected PC.

TRACcess is ideal for all your access control requirements

Safety | **Security** | Certainty

TRACcess is ideal for all your vendors

Benefits

- No hard wiring to networks or external power necessary
- Easily retrofit existing doors
- Eliminate bulky key rings and uncontrolled combination locks
- Create detailed access reports showing when a lock was opened and who opened it
- Ideal for controlling multiple access points
- Inexpensive to implement and administer
- Easily add or remove employee and vendor access remotely via the Internet

Applications

- Service access at remote sites: verify and control vendor access at communication sites, substations, or any location where access must not be compromised

- Unattended deliveries: eliminate key rings and boards; audit activity trail; manage route and special drops
- Retail access control: reduce loss; monitor opening and closing times; lock out former employees

Mechanical keys are costing you

- Downtime due to wrong keys and combinations
- Employees leaving your company with the master key in hand
- Routine rekeying and distribution of keys
- Vandalism and theft associated with unaccounted for keys
- Vendors requiring escort
- Inflated contractor billings

The list goes on. Spend less time and money managing old mechanical keys that provide limited security and no accountability. TRACcess is the proven solution for managing site access.
